

JUAN DAVID MORENO ALFONSO

Full Stack Software Engineer

Cali, Colombia | heisjuanda@gmail.com | juandamoreno.dev | linkedin.com/in/juandamoreno | github.com/heisjuanda

SUMMARY

Full Stack Software Engineer with 4+ years shipping production systems across frontend, backend, AWS and identity security. At Truora I owned the document validation flows behind identity checks for one of the company's largest clients, led projects and mentored interns. I worked in English every day.

WORK EXPERIENCE

Software Engineer, Truora

2024 – 2026

- Rebuilt OCR extraction and validation of Colombian driver's licenses for one of Truora's largest clients, adding multi-category support that reads every category with its own expiry date. Removed the false rejections that previously failed valid documents.
- Reduced fraud and false positives by cross-checking extracted data against RUNT to detect tampered documents, with required categories configurable per client.
- **Cut manual review time per case by 50% (60s to 30s)** by redesigning the human-in-the-loop tool used for validations the ML models flag as uncertain, with no loss in decision quality.
- Designed and shipped Labeling Review, turning those human decisions into training data for Truora's internal AI models by reusing existing infrastructure.
- Built the full Android document validation flow for the identity verification SDK (v1), in production at Lulo Bank, Claro and Addi.
- Lead projects end to end, mentor interns and interview engineering candidates. Maintain data collectors for government identity databases across LATAM.

Software Developer, Cressco

2023 – 2024

- **Improved initial page load by ~20%** on joshwoodcolour.com, a leading UK haircare e-commerce platform (React, Gatsby, Shopify), through bundle restructuring, lazy loading and technical SEO.
- **Raised marketing email deliverability by ~27%** by auditing campaign templates and copy against Google's sender guidelines.
- Built auto-save for Reddocares babysitter onboarding, eliminating data loss on session timeouts and cutting form abandonment.

Freelance Software Developer, Independent

2022 – 2023

- Delivered web applications for university students, faculty and non-profit communities as a continuous stream of independent contracts, moving from Java to Angular and then React.
- Led the frontend of [Patitas a Casa](https://patitasacasa.com), a pet adoption platform (React, PostgreSQL, Tailwind) with location and breed filters plus shelter dashboards.

TECHNICAL SKILLS

Languages: Go · Python · Kotlin · Java · JavaScript · TypeScript

Frontend: React · Vue.js · Gatsby · GSAP · HTML/CSS · Web Performance · Technical SEO

Backend & Data: FastAPI · Node.js · REST APIs · Microservices · PostgreSQL · DynamoDB

Cloud & DevOps: AWS (Lambda, DynamoDB, API Gateway, CloudFront) · Terraform · Docker · CI/CD · Git

Domain: Identity Verification · Fraud Detection · OCR · AI/LLM Integration · Prompt Engineering

SELECTED PROJECTS

- **AI Speech & Debate Platform** (FastAPI, Python, React). Automated feedback for students on pacing, word choice and argument structure. 85% of test users improved speaking confidence, 95% usability score.
- **JuandaBot** (Python, Telegram API, Ollama, OpenAI, n8n). RAG assistant over platform documentation, with local inference and automated cloud fallback. In production with 38 users.
- **Lambda Lang** (Racket). Functional language built from scratch: custom grammar, parser, evaluator and a REPL that visualises each beta-reduction step.

EDUCATION & LANGUAGES

Universidad del Valle, B.Sc. Software Engineering, Cali, Colombia

2020 – 2025

Languages: Spanish (native) · English (professional working proficiency, daily written docs and code review) · Portuguese (elementary)
