JUAN DAVID MORENO ALFONSO

Full Stack Software Engineer

Cali, Colombia | +57 3172824995 | heisjuanda@gmail.com | juandamoreno.dev | linkedin.com/in/juandamoreno | github.com/heisjuanda

SUMMARY

Full Stack Software Engineer with 4+ years shipping production systems across frontend, backend, AWS and identity security. Owned document validation flows behind identity checks for one of Truora's largest clients; led projects and mentored interns.

WORK EXPERIENCE

Software Engineer, Truora **May 2024 – Sep 2026**

- Cut manual review time per case by **50% (60s to 30s)** by redesigning the human-in-the-loop tool used for validations the ML models flag as uncertain, with no loss in decision quality.
- Designed and shipped Labeling Review, a human-review tool that turns manual decisions into training data for Truora's internal AI models; processed **369K documents for** 131 clients with monthly active clients growing **from 55 to 89 (+62%)**.
- Raised Chilean driver's license number extraction from **0% to 76.7%** using Gemini 3 Flash OCR and a structured prompt.
- Rebuilt OCR for Colombian driver's licenses (inDrive): multi-category extraction went **from none to 91% of documents**, reading per-category expiry dates in 84% with zero out-of-range values, and added RUNT validation of required categories.
- Built the Android document validation flow for the identity verification SDK (v1), running at high volume for **Lulo Bank, Claro and Addi.**
- Led projects end to end and mentored interns; led **4** engineering candidate interviews and shadowed **3** more.

Software Developer, Cressco **Aug 2023 – Apr 2024**

- Improved initial page load **by ~20%** on joshwoodcolour.com, a leading UK haircare e-commerce platform (React, Gatsby, Shopify), through bundle restructuring, lazy loading and technical SEO.
- Raised marketing email deliverability **by ~27%** by auditing campaign templates and copy against Google's sender guidelines.
- Built auto-save for Reddocares babysitter onboarding, eliminating data loss on session timeouts and cutting form abandonment.

Freelance Software Developer, Independent **Jan 2022 – Aug 2023**

- Delivered web applications for university students, faculty and non-profit communities as a continuous stream of independent contracts, moving from Java to Angular and then React.
- Led the frontend of Patitas a Casa, a pet adoption platform (React, PostgreSQL, Tailwind) with location and breed filters plus shelter dashboards.

TECHNICAL SKILLS

Languages: Go · Python · Kotlin · Java · JavaScript · TypeScript

Frontend: React · Vue.js · Gatsby · GSAP · HTML/CSS · Web Performance · Technical SEO

Backend & Data: FastAPI · Node.js · REST APIs · Microservices · PostgreSQL · DynamoDB

Cloud & DevOps: AWS (Lambda, DynamoDB, API Gateway, CloudFront) · Terraform · Docker · CI/CD · Git

Domain: Identity Verification · Fraud Detection · OCR · AI/LLM Integration · Prompt Engineering

SELECTED PROJECTS

- **AI Speech & Debate Platform** (FastAPI, Python, React). Automated feedback for students on pacing, word choice and argument structure. 85% of test users improved speaking confidence, 95% usability score.
- **JuandaBot** (Python, Telegram API, Ollama, OpenAI, n8n). RAG assistant over platform documentation, with local inference and automated cloud fallback. In production with 38 users.
- **Lambda Lang** (Racket). Functional language built from scratch: custom grammar, parser, evaluator and a REPL that visualises each beta-reduction step.

EDUCATION **Jan 2020 – Dec 2025**

Universidad del Valle, B.Sc. Software Engineering, Cali, Colombia

LANGUAGES

Spanish (native) · English (professional working proficiency, daily written docs and code review) · Portuguese (elementary)
